

# CARBON DRIVE™

## STRONG BELT + SLEEK SPROCKET

### DRIVE TECHNOLOGY YOU HAVE TO SEE TO BELIEVE

The clean, quiet, no-maintenance Carbon Drive™ System from Gates Corporation has been generating a lot of industry and end user interest. It trades messy chains for a super strong polyurethane belt and sleek sprockets to deliver breakthrough performance in mountain and commuter bikes.

Professional racers and everyday commuters have been putting the System to the test on Fixie, Spot Brand, and Trek bikes – just to name a few. In addition to making appearances at Eurobike 2009, Interbike 2009, the OutDoor Demo, and the Single Speed World Championships 2009, the debris-resistant, instant-engagement Carbon Drive™ is powering single-speed and internal geared bikes down streets and up hills in just about every kind of condition imaginable. And riders are thrilled with the results.

To update you on this revolutionary technology, we've included the following in this media kit:

- The Carbon Drive™ System brochure
- A recent press release
- Product information
- Testimonials
- And partner information
